TO WHOM IT MAY CONCERN

After the front window screen of our excavator was shattered by a flying projectile produced whilst cutting steel with an industrial shear, we were aware that for the protection of our personnel we needed a replacement window of the highest quality.

Since installation of the Hammer Glass window screen we have been impressed with its performance, certainly surpassing our expectations.

Since being fitted six month ago, the Hammer Glass Screen has been impacted several times by various items such as sheared fragments, reinforcing bar, and concrete chippings, all with enough potential force to break the window screen. However, the Hammer Glass Screen shows no evidence of damage whatsoever.

I am confident that in time all of our fleet will be converted to Hammer Glass and have no hesitation in recommending Hammer Glass to any machine fleet operator.

JOHN RILEY
