

## NEWS

Automotive - September 2014

[Business areas](#) | [Visit our website](#) | [Information and reference sheets](#) | [Contact us](#)

Come visit us at the Electra Mining Expo held in Johannesburg at the Nasrec Expo centre.

We will be in the Marquee Hall Stand no. M2-14 as from the 15<sup>th</sup> to 19<sup>th</sup> September 2014

## Unbreakable glass for all construction machinery

Are your customers tired of broken glass?

Apart from all the bother of dealing with shattered glass, both screen replacement and the associated downtime will cost them money. More important: A large stone or rock can injure the driver.

### **Sell them Hammerglass instead of normal glass!**

Hammerglass is a special coated polycarbonate sheet - 300 times stronger than glass! **See films from different tests>>>**

Normally 6 or 8 mm Hammerglass is perfectly adequate (**see fact sheet>>>**), but for high risk jobs we recommend RABS frames, read more below.

## **NEWS: Windscreens mounted in strong steel frames for Volvo's new wheeled loaders**

**After intensive R&D the new RABS frame for Volvo's wheel loader is ready and has been put into serial production.**

The 12 mm Hammerglass is mounted in a strong steel frame for maximum driver safety. The frame comes in 5 separate parts, but each part fits into the next like a jig-saw, ensuring simple installation and a perfect fit/tight seal against the cab. For added visibility and safety there are separate glazing panels low down on both sides.

Replace existing screens with new frames, or order your new wheel loader with Hammerglass frames already factory-mounted.

# Maximum driver security in high risk environment

Risk for large stones?  
Risk for shrapnel or stones at high speed?  
Risk for explosions?

Hammerglass AB from Sweden develops heavy-duty steel frames for different excavators and wheeled loaders, all equipped with a 12 mm Hammerglass screen.
